Let's Learn Together (LLT)

Let's Learn Together is a unique platform (a discussion forum), created to help learners collaborate with their peers to discuss, clarify, and share your learnings with each other. Peer to peer learning is a very important component of the learning process as you get to know different perspectives from a very diverse group of learners.

Note: The forum will not be moderated by any expert/moderator/mentor. The forum is planned to facilitate brainstorm among learners.

What all can be discussed in a Discussion forum?

- · Analytical Concepts
- · Issues in Code
- · Industry/ Real time examples on various analytics concepts

How will learners benefit from this activity?

- **Promote Active Learning:** Direct interaction between learners promote active learning.

- **Networking:** The forum gives them to opportunity to network with their peers.

- **Personalized Learning Experience:** Learners feel more comfortable and open when interacting with peers · Learners receiving more private time with their peers, allowing for a more personalized learning experience

- **Gain Deeper Understanding:** Peer helper gain a deeper understanding of what they teach to other peers, which benefits them and the peer they are helping

- **Industry Examples:** As learners comes from diverse backgrounds and across industries, they can share various use cases of real life examples based on their experience.

General guidelines for the learners:

1. **Please do not discuss anything related to assessments**. If any question is found related to an assessment question, marks shall be deducted for the candidate who asked the question as well as for the candidate who answered
2. **Maintain a polite and respectful environment**
3. **Refrain from discussing anything outside the scope of curriculum**

Action required from Mentors during mentoring session:

- · Introduce the discussion theme/agenda for the upcoming week.
- · Encourage participants to participate under the forum.
- · Emphasize on the benefits that may derive from this forum.

Note: This activity is currently planned for PDS, SMDM, AS and DM Courses Only.

Mind map during the Project week:

In the Project week, Learners are required to **share a mind map** which should visually summarize and simplify all the topics they have learnt in the ongoing Course.
A mind map is a technique widely used these days to draw complex interrelated ideas with an objective to better understand a problem and come out with innovative solutions. You may refer to this link -https://www.mindmapping.com/ for more information.

The benefits of creating mind-map are:

1. Quick Revision of the course
2. This document will prove very handy later in the course
3. Opportunity to show your creativity

Learners need to submit one file(word/pdf) in this submission. Mind map can be handwritten or can be created on a system. It gives the opportunity to a learner to be as creative as possible. Everyone will be able to see each other's submissions and like other submissions as well.
The Mind-map with the maximum likes will be highlighted and shared via announcement with all the learners of the batch
